DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-5, 8, 15, 18, 19 and 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Struzik et al (2003/0057318 A1).

Re - Claim 1: Struzik discloses an impact-absorbing, load-limiting connection device, comprising a first connection structure (#18); a second connection structure (#19 and #21), at least one of the first and second connection structures being moveable with respect to the other in a predetermined direction of movement corresponding to an anticipated main impact direction; a guiding mechanism (#24) configured to guide at least one of the first and second connection structures along the direction of movement, the guiding mechanism including at least one transverse force-absorbing guide element (#23) configured to absorb a force in a direction transverse to the direction of movement, and at least one impact-absorbing, load-limiting sacrificial element (#17 and #20) disposed between the first connection structure and the second correction structure and uncoupled from a transverse load path of the transverse force-absorbing guide element, wherein the sacrificial element is configured to be deformed

Art Unit: 3644

and destroyed by a relative movement between the first and second connection structures in the direction of movement upon application of a predetermined maximum load.

Re - Claim 2-5, 15, 18, 19 and 20: Struzik et al discloses every aspect of the applicant's invention. (see figures 1, 3 and 5 and Paragraphs #50, 51

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1, 4, 11, 18, 19 and 20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Mouille (5,228,640).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claim 6, 7 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Struzik et al. Struzik et al discloses every aspect of the applicant's invention except wherein, the tubular sacrificial element includes a fiber composite material, wherein the fiber composite material is wrapped and wherein the force-absorbing guide

Art Unit: 3644

element has a quasi-isotropic transverse stiffness. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a tubular sacrificial element includes a fiber composite material, wherein the fiber composite material is wrapped and wherein the force-absorbing guide element has a quasi-isotropic transverse stiffness since it has been held that a mere reversal of the essential working parts of a device involves only routine skill in the art. In re Einstein, 8 USPQ 167.

7. Claims 6 and 7 rejected under 35 U.S.C. 103(a) as being unpatentable over Mouille in view of ordinary skill in the art discloses every aspect of the applicant's invention except wherein, the tubular sacrificial element includes a fiber composite material and wherein the fiber composite material is wrapped. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a tubular sacrificial element includes a fiber composite material and wherein the fiber composite material is wrapped, since it has been held that a mere reversal of the essential working parts of a device involves only routine skill in the art. In re Einstein, 8 USPQ 167.

Allowable Subject Matter

8. Claims 9, 10, 12, 14, 16 and 17 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
